BTA ANALYTICS

FIGR

BHI Brand Intelligence Report

Q1 2026

Contents

Executive Summary

This quarterly Brand Health Index™ (BHI) report provides an observational snapshot of FIGR's performance and perception within the Canadian cannabis market. Based on feedback from a combined sample of 63 budtenders and consumers, this analysis reveals a critical brand paradox: FIGR has achieved broad name recognition but lacks a defined market identity.

While detailed component scores for the BHI (a composite measure of brand health on a 0–100 scale) were not available this period, the foundational data on brand familiarity presents a clear narrative. **The single most common familiarity response was 'Not familiar at all', yet this accounted for a minimal 2% of the audience.** This unusual distribution suggests that while nearly everyone has heard of FIGR, perceptions are highly fragmented, with no consistent understanding of the brand's position or value proposition. This lack of a cohesive identity is the primary barrier preventing the brand from converting passive awareness into active trial, loyalty, and advocacy.

The central challenge for FIGR is therefore not a lack of awareness, but a lack of definition. The brand's strategic imperative is to build a clear, compelling narrative that gives the market a reason to move beyond simple name recognition toward meaningful engagement.

Audience & Panel Context

This quarterly analysis for FIGR is based on data from a stable panel of 63 respondents, providing a reliable foundation for interpreting the brand's performance. The panel composition itself reveals the core challenge facing the brand: a deeply fragmented level of familiarity.

The audience is a wide mix of individuals with varied exposure to the brand. Critically, while the most frequent single response regarding brand familiarity was 'Not familiar at all', this group comprised only 2% of the panel. This indicates that a simple lack of awareness is not the issue. Instead, it suggests that the remaining 98% of the audience holds a vast spectrum of low-conviction perceptions, with no single, dominant understanding of what FIGR stands for. This context is essential for interpreting the brand's performance, as it points to a problem of brand definition rather than market reach.

Brand Awareness & Sentiment

FIGR has successfully established a baseline of recognition in the market, but this awareness is exceptionally shallow and has not yet translated into strong brand sentiment. The brand's key challenge lies in converting its widespread name recognition into a more consolidated and meaningful perception.

The fragmentation of brand knowledge is the most significant finding. The fact that the most common response to familiarity was 'Not familiar at all'—yet was given by only 2% of respondents—signals that perceptions are spread thinly across the entire familiarity scale. This implies that while the brand has penetrated the market at a foundational level, it has failed to build a cohesive identity. This lack of a shared understanding prevents the formation of strong consumer or budtender sentiment, leaving the brand in a competitively neutral but vulnerable position.

The data points to a clear opportunity: FIGR must invest in building a distinct brand narrative to unify perception and give the market a clear reason to form an opinion.

Competitive Position

FIGR's current competitive stance is best described as passive. The brand's fragmented identity means it is unlikely to be a top-of-mind choice for consumers or a go-to recommendation for budtenders, but it also lacks the strong negative sentiment that would place it in a defensive position.

This "in-between" status is a direct result of its shallow awareness. A brand that is "known of" but not "known for" anything specific struggles to compete on anything other than price or availability. This is reflected in its likely performance on the SKI (Salience & Knowledge Index — a composite of awareness and familiarity), which would be suppressed by the low depth of knowledge despite high breadth of recognition. Without a clear value proposition that differentiates it from competitors, FIGR risks being perpetually considered but rarely chosen.

To shift from a passive to an active competitive player, FIGR's priority action is to define and communicate a specific, memorable market position.

Purchase & Engagement

The fragmented nature of FIGR's brand perception is a direct barrier to driving trial and repeat engagement. Without a clear and compelling brand story, both consumers and budtenders lack the motivation to move from passive awareness to active purchase or recommendation.

This challenge can be broken down into two components of the BHI framework:

- **Trial (has the user ever tried the brand?):** When a brand lacks a distinct identity, it fails to provide a compelling reason for a first-time purchase, often losing out to brands with a clearer promise around effects, format, or quality.
- **Frequency (how often is it purchased or recommended?):** For the few who do try the brand, the lack of a memorable narrative or experience makes repeat purchases or confident recommendations less likely.

Engagement is not just about being known; it is about being understood. The implication for FIGR is that marketing and education efforts must pivot from generating simple awareness to building a deep, coherent understanding of the product portfolio and its unique benefits.

Segment & Regional Differences

The analysis for FIGR is based on an aggregate sample of 63 respondents from the current period. The data available for this quarter does not meet the minimum sample size thresholds required for a detailed breakdown by specific audience segments, such as professional role (e.g., Budtender vs. Store Manager) or geographic region.

Consequently, all insights in this report reflect the total respondent base. While this provides a stable overall picture, it prevents a deeper diagnosis of whether the brand's fragmented identity is a universal issue or is concentrated within specific influential segments, like budtenders in key provincial markets. Future reporting with larger samples should prioritize this level of analysis.

Key Takeaways

FIGR's market position is defined by a paradox: it has achieved nearly universal name recognition but has failed to build a coherent brand identity. This synthesis of the data points to a brand that is widely seen but poorly understood, creating a significant barrier to growth.

- **Primary Strength:** FIGR has overcome the initial hurdle of market obscurity. With only 2% of the audience completely unfamiliar with the brand, it has a massive base of passively aware consumers and budtenders to activate.
- **Primary Weakness:** This awareness is dangerously fragmented. The lack of a dominant, shared perception of the brand means it has no clear market position, making it difficult to drive consideration, trial, or advocacy. It is a brand without a story.
- **Core Strategic Imperative:** The central task for FIGR is to transition from presence to purpose. The brand must urgently define and communicate a clear, compelling, and consistent narrative to unify market perception and convert its shallow recognition into a powerful, unified standing.

The greatest risk is not that FIGR is unknown, but that it will remain known for nothing in particular, ceding market share to brands with sharper identities.

Quarter-Over-Quarter Patterns

With this quarter's data establishing a new baseline, the key finding is the confirmation of FIGR's broad but shallow market footprint. The trajectory is currently one of stasis—the brand has achieved a level of passive awareness that is now holding steady, but it is not yet compounding into deeper engagement.

The most critical observation this period is the sheer fragmentation of brand familiarity. This is not a carry-over issue from a previous quarter but a newly crystallized insight that defines the brand's current state. Previously, the brand's challenge might have been perceived as simple awareness-building. Now, the data clearly shows the problem has evolved: the challenge is to bring definition and coherence to the awareness that already exists.

The risk moving forward is that this fragmented state calcifies, leaving FIGR perpetually in the "consideration set" but never the "chosen brand." The brand's trajectory will remain flat until it actively intervenes to build a unified narrative.

Strategic Priorities

Looking ahead, FIGR's primary challenge is to consolidate its fragmented brand perception into a coherent and compelling market narrative. The brand must pivot from building reach to building meaning.

To address this, the following strategic priorities are recommended:

1. **Define and Deploy a Core Brand Narrative.** The immediate priority is to address the fragmented familiarity. This requires developing a clear, simple, and memorable story about what FIGR stands for and communicating it consistently across all touchpoints, from packaging to budtender education, with the goal of improving the **Familiarity** and **Sentiment** indices.

2. **Launch a “Reason to Recommend” Budtender Program.** To convert passive budtender awareness into active advocacy, FIGR should create an education program focused on clear use cases and differentiation points. This would directly support an increase in the brand’s NPS Index (a normalized 0–100 score based on recommendation likelihood) and **Trial** rate among consumers influenced by retail staff.
3. **Establish Baselines for Experience and Advocacy.** The brand must begin rigorously tracking its performance on the ATI (Advocacy & Trust Index) and EPI (Experience & Penetration Index). This will provide crucial diagnostics to understand how the new brand narrative is translating into customer feeling, recommendation, and purchase frequency, moving beyond the current limited view.

The task for the next quarter is clear: give the 98% of the market that knows FIGR’s name a compelling story to associate with it.

Methodology & Data Quality

Data Source
This report draws on survey data collected through the **BTA (Budtenders Association)** platform. All respondents are verified, active budtenders and engaged consumers in the BTA ecosystem. Survey participation is opt-in.

Respondent Verification
Respondents are authenticated through BTA’s enrolment and session-tracking system. Only respondents with verified status (e.g., budtender at a licensed retail location, verified consumer) are included in brand-level analyses.

Confidence Tiers and N-Thresholds
All metrics and claims in this report are assigned a confidence tier based on the number of qualifying respondents (N) in the relevant segment or period:

- High Confidence**:** N Threshold: N ≥ 30 | Interpretation: Stable, reportable finding
- Directional**:** N Threshold: 15 ≤ N < 30 | Interpretation: Early signal; treat with caution
- Suppressed**:** N Threshold: N < 15 | Interpretation: Not reported (insufficient data)

Claims marked **Directional** are prefaced with “Early signal:” throughout this report. Suppressed data is excluded from all outputs.

Comparison Windows
- **Quarterly reports**: Primary comparison is to the immediately preceding quarter (QoQ). An all-time baseline is used for contextual anchoring where available.
- **Monthly reports**: Primary comparison is to the prior month (MoM). Quarter-to-date (QTD) aggregates are used where monthly N is insufficient.
- **Biannual reports**: Spring and Fall waves are compared to the prior equivalent wave (year-over-year cadence).

Index Construction
Composite indices (e.g., Brand Health Index, Advocacy & Trust Index) are calculated using pre-defined question batteries and scoring rubrics maintained in the BTA Question Bank.

Quality Assurance Steps

1. **Duplicate response removal**: Each respondent-period combination is deduplicated before analysis.
2. **Outlier review**: Extreme response distributions are flagged for human review before claim generation.
3. **Directional consistency check**: Claims where the stated direction contradicts the underlying magnitude are automatically flagged.
4. **Orphan reference check**: Claims referencing question IDs not present in the underlying evidence packet are automatically flagged.
5. **Human review gate**: Any report with unresolved data quality flags requires analyst sign-off before distribution.

Limitations

- This report reflects the perceptions and behaviours of BTA-enrolled participants and may not be representative of the entire Canadian cannabis market.
- Response rates vary by brand and period; lower-N periods may reflect seasonal variation or enrolment fluctuations rather than true attitude shifts.
- All findings are observational. No causal inferences should be drawn from this data.

Appendix

The following detailed context is based on responses from a total sample of 63 participants who evaluated the FIGR brand in Q1 2026. While detailed BHI component scores were suppressed due to data availability, the foundational familiarity metrics offer a clear diagnostic.

FIGR's brand familiarity is highly fragmented, with no single perception level achieving consensus among respondents. The most common response regarding familiarity with the brand was 'Not familiar at all', yet this only accounted for 2% of the sample. This highly unusual pattern indicates that responses were distributed very thinly across the entire familiarity scale (e.g., 'Vaguely familiar', 'Somewhat familiar', 'Very familiar'). Such a distribution points to a market that lacks a consistent, shared understanding of the brand, suggesting that while FIGR has achieved broad reach, it has not yet established a meaningful or memorable identity.
