Executive Summary

Early signal: FIGR demonstrates very low overall brand awareness for the quarter, with 0.0% Top-of-Mind (TOM) percentage and only 4.5% Aided Awareness among the general audience (N=22). This low awareness also extends to Budtender respondents (N=12), where 0% Top of Mind, Unaided, and Aided awareness was recorded. In Ontario, aided awareness reached 8.3% (N=12), with TOM awareness remaining at 0%.

Early signal: For the overall audience, FIGR exhibits an Advocacy Gap, characterized by a Sentiment Index of 71.6 but a lower Net Promoter Score (NPS) of -13.6. This suggests the brand is liked but not actively recommended, with the overall NPS score indicating more detractors than promoters among the surveyed audience (N=22).

Early signal: In contrast to the general audience, FIGR's NPS score among Budtenders is positive at 8.3 (N=12). However, among Store Managers, the NPS score is notably low, approximately -50.0 (N=6). All observations regarding advocacy and awareness for the quarter are based on low sample sizes, necessitating cautious interpretation of these directional signals.

Panel Context Overview

Early signal: All observations for FIGR in 2026 Q1 are based on low sample sizes (N=22 for all respondents and N=12 for Budtenders), indicating that these are preliminary insights. A very low aided awareness of approximately 4.5% was observed among all respondents; however, the familiarity index was notably high at approximately 92.3%, suggesting that those who are aware of the brand know it very well. In terms of engagement, a substantial portion of surveyed respondents (45.5%) reported never purchasing FIGR. Combined, approximately 68.2% reported purchasing FIGR never or less than once per month, and only 18.2% indicated having tried the brand once.

Early signal: Regarding brand perception, approximately 63.6% of surveyed respondents expressed either 'Somewhat positive' or 'Very positive' sentiment towards FIGR. However, approximately one-third (31.8%) reported never recommending the brand. This discrepancy is reflected in an observed 'Advocacy Gap' pattern for all respondents, where a high sentiment index of 71.6 contrasts with an NPS score of -13.6. This suggests that while the brand is generally liked, it may not be actively recommended, with more detractors than promoters overall.

Early signal: Focusing on Budtenders, FIGR also exhibits an 'Advocacy Gap' with a very high sentiment index of 79.2. This contrasts with an NPS score of 8.3, which, while positive, falls below the threshold for strong advocacy among this group. Additionally, the Strategic Knowledge Index (SKI) for FIGR among Budtenders is notably low at 30.9, suggesting limited strategic understanding or perception of the brand within this key segment. These Budtender-specific insights are based on a particularly low sample size.

Bhi Core Dimensions

Early signal: For 2026 Q1, FIGR's overall Awareness Index is very low at 2.7, with Top of Mind awareness reported at 0.0% and Aided awareness at 4.5%. This low awareness extends to specific segments, where Budtender respondents recorded an Awareness Index of 0.0, with both Top of Mind and Aided awareness at 0.0%. In Ontario, awareness is also notably low, with a 5.0 Awareness Index,

stemming from 0.0% Top of Mind and 8.3% Aided Awareness for the segment. These observations are based on limited sample sizes.

Early signal: Despite very low awareness, FIGR demonstrates a high Familiarity Index of 92.3 and a strong Trial Index of 74.5 among the All segment in 2026 Q1, based on a low sample size. Approximately 18.2% of respondents reported trying FIGR once, a figure that remained stable from the previous period. Conversely, a significant portion of respondents, 45.5%, indicated they never purchase FIGR, and an additional 22.7% purchase less than once per month; these purchase frequencies showed no change from the prior period.

Early signal: FIGR exhibits an “Advocacy Gap” across various segments in 2026 Q1. The overall segment shows a strong Sentiment Index of 71.6, but a low NPS score of –13.6, suggesting positive sentiment does not consistently translate to active recommendations. A combined 63.6% of respondents expressed either ‘Somewhat positive’ or ‘Very positive’ sentiment towards FIGR, which showed no change from the previous period. For the Ontario segment, an “Advocacy Gap” is also present, with a positive Sentiment Index of 68.8 contrasting with an NPS score of –8.3. Among Budtenders, the brand demonstrates an “Advocacy Gap” where a high Sentiment Index of 79.2 is coupled with an NPS score of 8.3. Furthermore, 31.8% of respondents reported never recommending FIGR, while 13.6% recommend it 2-3 times per month, with no observed change from the prior period for these recommendation frequencies.

Early signal: Regarding drivers for FIGR, ‘Local / Canadian producer’ and ‘Budtender recommendation’ were each cited by 18.2% of respondents in 2026 Q1. No quarter-over-quarter change was reported for these identified drivers.

Competitive Context

Early signal: FIGR’s familiarity index for the overall All segment is high at 92.3%, yet its overall awareness index is considerably lower at 2.7%. This suggests that while customers who are aware of FIGR tend to be familiar with it, there is a substantial opportunity to broaden overall brand recognition within the market.

Early signal: For the overall All segment, FIGR exhibits an advocacy gap, with a high sentiment index of 71.6% but a low Net Promoter Score of –13.6%. This indicates that the brand is liked but not actively recommended by customers. In contrast, the Net Promoter Score for Budtenders is notably higher at 8.3% compared to the overall All segment, suggesting a difference in recommendation propensity among these key influencers.

Early signal: Several key purchase and sentiment metrics remained stable quarter-over-quarter. The proportion of respondents reporting never purchasing FIGR remained stable (no change) at 45.5%. Similarly, the percentage of respondents who tried FIGR once remained stable (no change) at 18.2%. Recommendation behavior also showed stability, with approximately 31.8% of respondents reporting never recommending the brand (no change). Overall positive sentiment (a combined 63.6% for “Somewhat positive” or “Very positive”) also remained stable (no change), as did “Budtender recommendation” as a cited driver, which remained stable (no change) at 18.2%.

Engagement Education Performance

Early signal: In 2026_Q1, based on limited survey data (N=22), engagement patterns for FIGR largely remained stable. The proportion of respondents reporting never purchasing FIGR remained stable (0.0 pts) at approximately 45.5%, with an additional 22.7% also remaining stable (0.0 pts) in purchasing less than once per month. Similarly, the percentage of respondents who had tried the brand once remained stable (0.0 pts) at approximately 18.2%.

Early signal: Reflecting these stable engagement metrics, positive sentiment towards FIGR (combining 'Somewhat positive' and 'Very positive' responses) also remained stable (0.0 pts) at approximately 63.6% in 2026_Q1. Furthermore, the proportion of respondents who reported never recommending the brand remained stable (0.0 pts) at approximately 31.8%.

Early signal: Regarding identified drivers for FIGR, both 'Local / Canadian producer' and 'Budtender recommendation' were each cited by approximately 18.2% of respondents, with both figures remaining stable (0.0 pts) compared to the prior period. Overall, the 2026_Q1 data suggests a plateauing trend across key engagement and sentiment indicators for FIGR, with no significant shifts observed within this period.

Audience Breakdowns

Early signal: For FIGR across all segments, brand recognition remains very low, with Top-of-Mind awareness at 0% and aided awareness at 4.5% (N=22). The sentiment index is 71.6% while the NPS score is -13.6%, suggesting an Advocacy Gap where the brand is liked but not actively recommended (N=22). Looking at overall trends, the percentage of respondents who reported never purchasing FIGR was 45.5%, a figure which remained stable compared to the previous period (N=22). A combined 63.6% of respondents expressed positive sentiment towards FIGR, indicating a stable sentiment from the previous period (N=22). Similarly, 31.8% of respondents reported never recommending FIGR, a figure that remained stable, and 18.2% indicated they had tried the brand once, showing no change from the prior period (N=22).

Early signal: Among Budtenders (N=12), FIGR's sentiment index is 79.2% but its NPS score is 8.3%, also suggesting an Advocacy Gap where the brand is liked but not actively recommended. When comparing roles, the NPS score among Budtenders is moderately higher (up 22.0 pts) than the -13.6% NPS observed across all segments (N=22). Early signal: Regionally, in Ontario (N=12), FIGR's sentiment index is 68.8% and its NPS score is -8.3%, which similarly indicates an Advocacy Gap for the brand.

Insight Synthesis

FIGR continues to face a critical challenge with very low brand awareness, registering 0% Top of Mind and 4.5% Aided awareness overall, with no awareness observed among key segments such as Budtenders and Store Managers. Despite this limited recognition, the brand exhibits a consistent "Advocacy Gap," characterized by a high familiarity (92.3%) and largely positive sentiment (Sentiment Index 71.6%) that does not consistently translate into active recommendations (overall NPS -13.6%). This is further evidenced by low purchase engagement, with 45.5% of respondents never purchasing and an additional 22.7% purchasing less than once per month. Most key purchase, recommendation, and sentiment metrics have remained stable quarter-over-quarter, indicating a lack of significant shifts. An exception is observed among Budtenders, who report a comparatively higher Net Promoter Score (8.3%), suggesting a segment with stronger, albeit nascent, advocacy potential. The strategic imperative for FIGR is to

significantly broaden brand recognition and convert existing positive sentiment into active advocacy and increased purchase frequency.

Qoq Learning Trajectory

FIGR's brand trajectory indicates that consistently positive overall sentiment (71.6% Sentiment Index, 63.6% positive sentiment QOQ) and high familiarity and trial among those aware (92.3% Familiarity Index, 74.5% Trial Index) are compounding strengths. Advocacy among Budtenders is also compounding positively, as evidenced by their higher NPS of 8.3 points. However, the brand is significantly at risk due to critically low overall awareness (2.7 Awareness Index, 0.0% Top of Mind awareness across key segments and regions), which remained stable QOQ. This low awareness is hindering broader engagement, as seen in the stagnant high percentages of respondents who never purchase (45.5%) or purchase less than once per month (22.7%). An omnipresent Advocacy Gap, where positive sentiment does not translate to recommendations (overall NPS -13.6, stable 31.8% never recommend), further underscores this risk. Notably, the deeply negative NPS among Store Managers (-50.0 points) presents a critical vulnerability. Therefore, future efforts should prioritize testing strategies to significantly increase overall brand awareness and close the Advocacy Gap. Specifically, testing initiatives to leverage Budtender advocacy and investigate the root causes of disengagement and negative sentiment among Store Managers are warranted to unlock broader recommendation and purchase intent.

Looking Ahead

Looking ahead, the primary strategic imperative for FIGR will be to address its critically low brand awareness. Current data indicates overall awareness remains limited, with negligible Top of Mind and very low Aided Awareness across all segments, including key influencers such as Budtenders and Store Managers, and in critical regions like British Columbia. Future initiatives will focus on foundational efforts to increase brand recognition and recall within the market.

Simultaneously, the brand's "Advocacy Gap" will be a key area for ongoing attention. While sentiment towards FIGR is largely positive among those aware, this positivity does not consistently translate into active recommendations or repeat purchases. Pulse checks will continue to monitor the disparity between positive sentiment and Net Promoter Score, aiming to understand and mitigate factors preventing active advocacy. Specific attention will be paid to translating the relatively stronger Budtender NPS into broader awareness and recommendation.

Furthermore, efforts will be directed towards improving purchase engagement and retention. A significant proportion of respondents report never purchasing the brand or only having tried it once. Future activities will aim to convert positive sentiment and initial trial into sustained purchasing behavior. Pulse checks will track changes in purchase frequency and the proportion of respondents moving from 'never purchasing' or 'tried once' to more regular engagement.

Methodology Quality Controls

Data Source

This report draws on survey data collected through the **BTA (Budtender Training Academy)** platform. All respondents are verified, active budtenders enrolled in the BTA training ecosystem. Survey participation is opt-in and occurs as part of ongoing training and assessment cycles.

Respondent Verification

Respondents are authenticated through BTA's enrolment and session-tracking system. Only respondents with verified budtender status at a licensed retail cannabis location are included in brand-level analyses.

Confidence Tiers and N-Thresholds

All metrics and claims in this report are assigned a confidence tier based on the number of qualifying respondents (N) in the relevant segment or period:

Tier	N Threshold	Interpretation
High Confidence	$N \geq 30$	Stable, reportable finding
Directional	$15 \leq N < 30$	Early signal; treat with caution
Suppressed	$N < 15$	Not reported (insufficient data)

Claims marked **Directional** are prefaced with “Early signal:” throughout this report. Suppressed data is excluded from all outputs.

Comparison Windows

- **Quarterly reports:** Primary comparison is to the immediately preceding quarter (QoQ). An all-time baseline is used for contextual anchoring where available.
- **Monthly reports:** Primary comparison is to the prior month (MoM). Quarter-to-date (QTD) aggregates are used where monthly N is insufficient.
- **Biannual reports:** Spring and Fall waves are compared to the prior equivalent wave (year-over-year cadence).

Index Construction

Composite indices (e.g., Brand Health Index, Choice Friction Index) are calculated using pre-defined question batteries and scoring rubrics maintained in the BTA Question Bank. Index weights and direction assignments are documented in the Appendix.

Quality Assurance Steps

1. **Duplicate response removal:** Each respondent-period combination is deduplicated before analysis.
2. **Outlier review:** Extreme response distributions are flagged for human review before claim generation.
3. **Directional consistency check:** Claims where the stated direction contradicts the underlying magnitude are automatically flagged as `direction_mismatch`.
4. **Orphan reference check:** Claims referencing question IDs not present in the underlying evidence packet are flagged as `orphan_reference`.
5. **Human review gate:** Any report with a readiness score below 0.70 or with unresolved directional mismatch flags requires analyst sign-off before distribution.

Limitations

- This report reflects the perceptions and behaviours of BTA-enrolled budtenders and does not represent the broader cannabis retail workforce.
- Response rates vary by brand and period; lower-N periods may reflect seasonal variation or enrolment fluctuations rather than true attitude shifts.
- All findings are observational. No causal inferences should be drawn from this data.

Appendix

Early signal: For FIGR in 2026_Q1, 68.18% of respondents demonstrated low purchase engagement, with 45.45% reporting never purchasing the brand and an additional 22.73% purchasing less than once per month. Despite this, overall sentiment towards the brand was largely positive, with a combined 63.64% of respondents reporting either “Very positive” or “Somewhat positive” sentiment.

However, a notable 31.82% of respondents indicated they “Never” recommend the brand, and 18.18% reported having tried the brand only “once.” These insights are derived from low-N survey data and should be interpreted with caution.

Early signal: Overall awareness for FIGR in Q1 2026 remained limited. Aided Awareness registered at 4.55%, while Top of Mind awareness was 0.00%. When segmented, Aided Awareness in Ontario was 8.33%, but Top of Mind awareness remained at 0.00% for the province. Critically, awareness for the brand was 0.00% (across Top of Mind, Unaided, and Aided measures) among both Budtenders and Store Managers. Similarly, British Columbia also recorded 0.00% awareness across all measures. These awareness figures are based on small sample sizes and suggest a lack of significant brand recognition in these key segments and regions.

Early signal: FIGR’s overall Net Promoter Score (NPS) was –13.64 points in 2026_Q1. However, notable variations exist across segments. For Budtenders, the NPS was 8.33 points, which was notably higher than for Store Managers, who reported an NPS of –50.00 points. Regionally, Ontario respondents reported an NPS of –8.33 points for FIGR. Among the 25-34 age group, the NPS registered at –16.67 points. All NPS data points are based on limited or very limited sample sizes and necessitate cautious interpretation.
