## Executive Summary

FIGR is currently grappling with a significant **Advocacy Gap** in 2026 Q1, defined as a perception-behaviour disconnect where the brand is liked but not actively recommended (Sentiment > 65 but NPS Index < 50 OR recommendation frequency < 40). While overall sentiment for the brand is notably high at 73.0, its raw Net Promoter Score (NPS) registers a negative -14.3, indicating that detractors (36.5%) significantly outweigh promoters (22.2%). This core challenge reflects that while consumers may hold a positive overall feeling toward FIGR, their experiences might not be sufficiently compelling or shareable to motivate active peer recommendation, or retail partners feel underprepared to advocate for it.

Despite limited overall brand reach, FIGR demonstrates strong engagement and conversion among consumers who are aware of the brand, creating a notable divergence between awareness and familiarity/trial. While overall Aided awareness (recognition from a prompted list) is low at 4.8% and Top-of-Mind (TOM) awareness (first unaided brand mention) stands at just 1.6% (N=63), familiarity with the brand is exceptionally high at 96.8% among those aware, with strong trial rates at 77.8%. This suggests that for those who discover FIGR, the product experience is positive and leads to initial engagement, but broader visibility remains a significant hurdle. This pattern could indicate either highly effective product delivery for a niche audience, targeted marketing efforts that limit broader exposure, or distribution challenges that restrict initial reach despite a compelling offering.

Advocacy and awareness levels vary considerably across key retail and demographic segments, with Store Managers showing a notable hesitance to recommend the brand. There appears to be no Aided or Top-of-Mind awareness among Store Managers (0.0% for both, dir.; N=19), which aligns with a significantly negative raw NPS of -36.8 (dir.; N=19). This starkly contrasts with Budtenders, who report a positive raw NPS of 5.9 (N=34), suggesting a fundamental difference in how these key retail stakeholders perceive and advocate for the brand. Aided awareness remains very low in the Province of Ontario at 5.7% (N=35) and among Budtenders at 2.9% (N=34). Early signal: The 35-44 age group registers the highest Aided awareness at 6.3% (dir.; N=16).

| Segment                | Raw NPS           | Aided Awareness (%) | TOM Awareness (%) | N          |
|------------------------|-------------------|---------------------|-------------------|------------|
| <b>Retail Segments</b> | Budtenders        | 5.9                 | 2.9               | NA         |
| 34                     | Store Managers    | -36.8 (dir.)        | 0.0 (dir.)        | 0.0 (dir.) |
| 19                     | <b>Geographic</b> | Ontario             | -5.7              | 5.7        |
| 2.9                    | 35                | <b>Demographic</b>  | 35-44 age group   | NA         |
| 6.3 (dir.)             | 6.3 (dir.)        | 16                  |                   |            |

## Audience & Panel Context

FIGR has achieved widespread recognition, but struggles with differentiation.

FIGR demonstrates a strong baseline of market recognition, with an exceptionally **high Familiarity Index of 96.8%** among all respondents in 2026 Q1. This widespread recognition, where only a marginal 1.6% reported no familiarity, suggests FIGR has established a significant presence within the market. However, this familiarity does not yet translate into distinctiveness, as a majority of respondents (60.3%) perceive FIGR as “about the same” as other cannabis brands, indicating an opportunity for

stronger brand differentiation. Nonetheless, “consistent quality” remains a key driver for engagement, cited by 39.7% of respondents, underpinning the brand’s appeal for those who engage.

**DATA** Data: Familiarity Index = 96.8% (2026\_Q1, N=63)

**DATA** Data: Not familiar at all = 1.6% (2026\_Q1, N=63)

**DATA** Data: Perceived as “about the same” as other brands = 60.3% (2026\_Q1, N=63)

**DATA** Data: “Consistent quality” as key driver = 39.7% (2026\_Q1, N=63)

Despite this strong familiarity and positive sentiment around quality, FIGR faces a significant challenge in driving active advocacy, as evidenced by the **Advocacy Gap identified in the Executive Summary** across all segments in 2026 Q1. The brand recorded a high Sentiment Index of 73.0, indicating a generally positive feeling, yet this contrasts sharply with a low Net Promoter Score (NPS) of -14.3. This gap, also apparent in the Ontario segment (Sentiment Index 73.6 vs. NPS -5.7), suggests that while consumers like the brand, their experiences may not be sufficiently compelling or memorable to trigger peer recommendation. For retail partners, this disconnect could stem from education gaps, leading to underpreparedness or low confidence in recommending, or product complexity that makes it challenging to articulate.

**DATA** Data: Sentiment Index = 73.0 (2026\_Q1, N=63)

**DATA** Data: Raw NPS = -14.3 (2026\_Q1, N=63)

**DATA** Data: Ontario Sentiment Index = 73.6 (2026\_Q1, N=35)

**DATA** Data: Ontario Raw NPS = -5.7 (2026\_Q1, N=35)

A generally low purchase frequency for FIGR contributes to the observed low advocacy. A significant majority of respondents (58.7%) reported purchasing the brand at most once per month in 2026 Q1, which aligns with a low Frequency Index of 29.5 across all segments. This infrequent engagement suggests that while consumers may be familiar with and feel positively about FIGR, the brand has not yet established itself as a regular choice. The negative overall NPS of -14.3, driven by a larger proportion of detractors (36.5%) than promoters (22.2%), reinforces that the brand connection is not consistently strong enough to convert positive feeling into active recommendation or frequent purchase.

**DATA** Data: Purchase at most once per month = 58.7% (2026\_Q1, N=63)

**DATA** Data: Frequency Index = 29.5 (2026\_Q1, N=63)

**DATA** Data: Detractors = 36.5% (2026\_Q1, N=63)

**DATA** Data: Promoters = 22.2% (2026\_Q1, N=63)

FIGR's priority action here is to leverage its established familiarity and positive quality perception to create a more distinct brand narrative that fosters deeper engagement and translates into more frequent purchases and active recommendations.

## Brand Awareness & Sentiment

FIGR is recognized by many, but remembered by few.

FIGR exhibits a significant discrepancy between high familiarity and developing awareness, suggesting that while many have encountered the brand, it does not consistently achieve top-of-mind recall. The overall Familiarity Index stands at an impressive **96.8%** in Q1 2026, reaching 100% among Ontario respondents, indicating widespread recognition. However, overall brand Awareness Index (a composite score for awareness combining Top-of-Mind, Total Unaided, and Aided awareness components) is low at 3.5 (N=63), with Top-of-Mind awareness at 1.6% and Aided awareness at 4.8%. This gap suggests that FIGR benefits from distribution and exposure, allowing for recognition, but struggles to break through as a spontaneously recalled brand without prompting.

**DATA** Data: Familiarity Index = 96.8% (Q1 2026, N=63)

**DATA** Data: Ontario Familiarity Index = 100.0% (Q1 2026, N=35)

**DATA** Data: Overall Awareness Index = 3.5 (Q1 2026, N=63)

**DATA** Data: Top of Mind awareness = 1.6% (Q1 2026, N=63)

**DATA** Data: Aided awareness = 4.8% (Q1 2026, N=63)

Awareness levels vary considerably across segments, highlighting specific visibility challenges and opportunities.

| Segment         | Awareness Index | N  |
|-----------------|-----------------|----|
| Overall         | 3.5             | 63 |
| Store Managers  | 0.0 (dir.)      | 19 |
| 35-44 age group | 6.3 (dir.)      | 16 |

A significant insight for FIGR in Q1 2026 is the presence of the **Advocacy Gap identified in the Executive Summary**. While overall sentiment towards the brand is strong, indicated by a Sentiment Index of 73.0, the Net Promoter Score (NPS) is negative at -14.3 (N=63). This suggests that consumers generally like the brand but are not actively inclined to recommend it to others. This gap persists in the Ontario segment, where a Sentiment Index of 73.6 contrasts with an NPS of -5.7 (N=35). This divergence could indicate that positive experiences are not consistently translated into active advocacy, potentially due to subtle product complexities or a lack of compelling, shareable brand narratives.

Advocacy also varies significantly among retail professionals, revealing a clear opportunity to enhance staff engagement.

| Segment | Sentiment Index | Raw NPS | N |
|---------|-----------------|---------|---|
|---------|-----------------|---------|---|

|                |      |              |    |
|----------------|------|--------------|----|
| Overall        | 73.0 | -14.3        | 63 |
| Ontario        | 73.6 | -5.7         | 35 |
| Budtenders     | NA   | 5.9          | 34 |
| Store Managers | NA   | -36.8 (dir.) | 19 |

Engagement with FIGR is characterized by **infrequent purchasing**, with a majority of respondents (58.7%) buying the brand at most once per month in Q1 2026. This infrequent engagement, coupled with the perception that 60.3% of respondents view FIGR as “About the same” compared to other brands, suggests a significant opportunity for enhanced differentiation. Despite these challenges, “Consistent quality” emerged as the most frequently cited driver (39.7%), indicating that product reliability is a key positive attribute that resonates with the audience and could serve as a foundation for stronger brand positioning.

**DATA** Data: Purchase at most once per month = 58.7% (Q1 2026, N=63)

**DATA** Data: Perceived as “About the same” = 60.3% (Q1 2026, N=63)

**DATA** Data: “Consistent quality” as driver = 39.7% (Q1 2026, N=63)

The implication for FIGR is to invest in targeted brand messaging that not only highlights consistent quality but also articulates a distinct value proposition, moving the brand beyond mere recognition to spontaneous recall and active advocacy among both consumers and retail partners.

## Competitive Position

FIGR currently exhibits the **Advocacy Gap identified above**, indicating that while the brand is generally well-liked, this positive sentiment does not consistently translate into active recommendations. Across the ‘All’ segment, sentiment registered high at 73.0, yet the raw NPS score was negative at -14.3. This pattern persists in the Ontario segment, where a Sentiment Index of 73.6 contrasts with an NPS of -5.7. This sustained gap suggests that consumers may find the product experience positive but not sufficiently memorable or shareable to trigger peer recommendation, or retail partners may feel underprepared or unmotivated to actively recommend it due to education gaps or product complexity.

**DATA** Data: Overall Sentiment Index = 73.0 (N=63)

**DATA** Data: Overall Raw NPS = -14.3 (N=63)

**DATA** Data: Ontario Sentiment Index = 73.6 (N=35)

**DATA** Data: Ontario Raw NPS = -5.7 (N=35)

Despite broad familiarity, FIGR faces a significant challenge in achieving widespread top-of-mind awareness, directly impacting its competitive standing. While familiarity is very high, standing at **96.8%** among the ‘All’ segment and 100.0% in Ontario, overall Awareness (a composite score for awareness) remains very low at 3.5 for the ‘All’ segment. This persistent discrepancy suggests that

while many have encountered or recognize FIGR, it struggles to break through as a spontaneously recalled brand. This challenge is further exacerbated by a significant majority (60.3%) of respondents perceiving FIGR as ‘About the same’ compared to other brands, underscoring a critical lack of clear differentiation in a highly fragmented market.

**DATA** Data: Overall Familiarity Index = 96.8% (N=63)

**DATA** Data: Ontario Familiarity Index = 100.0% (N=35)

**DATA** Data: Overall Awareness Index = 3.5 (N=63)

**DATA** Data: Perceived as ‘About the same’ = 60.3% (N=63)

The brand’s moderate purchase frequency, with a combined 58.8% of purchasers buying FIGR at most once per month, suggests an opportunity to convert positive sentiment and high familiarity into more frequent engagement. ‘Consistent quality’ (39.7%) and ‘appealing packaging or design’ (25.4%) are key reported drivers, with ‘budtender recommendations’ also influencing 23.8% of respondents. Leveraging these positive drivers to strengthen active advocacy and establish clearer differentiation in a fragmented market could be instrumental in shifting these purchase patterns and reinforcing FIGR’s competitive position.

**DATA** Data: Purchase at most once per month = 58.8% (N=63)

**DATA** Data: ‘Consistent quality’ as driver = 39.7% (N=63)

**DATA** Data: ‘Appealing packaging or design’ as driver = 25.4% (N=63)

**DATA** Data: ‘Budtender recommendation’ as driver = 23.8% (N=63)

The data points to a clear opportunity: FIGR should develop a distinctive brand narrative that highlights unique product attributes beyond quality and design, making it easier for both consumers and budtenders to perceive and articulate its unique value in a crowded marketplace, thereby driving more frequent purchases.

## Purchase & Engagement

Familiarity does not yet translate into distinct market preference for FIGR.

FIGR has established a strong foundational presence within the market, as evidenced by a minimal proportion of respondents (only 1.6%) indicating a lack of familiarity with the brand in 2026 Q1. However, this high level of recognition does not yet translate into distinct competitive positioning, with a majority of respondents (60.3%) perceiving FIGR as ‘About the same’ compared to other brands. This gap suggests that despite effective distribution and exposure, there is a lack of clear brand differentiation, making it challenging for consumers to articulate unique benefits and converting familiarity into distinct preference.

**DATA** Data: Lack of familiarity = 1.6% (2026\_Q1, N=63)

**DATA** Data: Perceived as 'About the same' = 60.3% (2026\_Q1, N=63)

Specific attributes are driving purchase decisions for FIGR, yet these positive drivers are not consistently translating into frequent engagement. 'Consistent quality' stands out as a primary driver, cited by 39.7% of respondents, suggesting product reliability is a key factor. 'Appealing packaging or design' also contributes to purchase intent for a notable segment (25.4%). Despite these clear drivers, purchase engagement indicates significant room for growth in frequency, with a combined majority of purchasers (58.8%) buying FIGR at most once per month. This highlights an opportunity to convert initial or occasional purchases, motivated by quality and design, into more regular, habitual engagement.

**DATA** Data: 'Consistent quality' as driver = 39.7% (2026\_Q1, N=63)

**DATA** Data: 'Appealing packaging or design' as driver = 25.4% (2026\_Q1, N=63)

**DATA** Data: Purchase at most once per month = 58.8% (2026\_Q1, N=63)

FIGR should develop targeted loyalty programs or subscription options that reward consistent engagement, leveraging its core strengths in quality and design to build habit-forming purchase behaviours among its currently infrequent buyers.

## Segment & Regional Differences

FIGR faces a dual challenge of converting recognition to trial and sentiment to advocacy.

FIGR currently experiences the **Advocacy Gap identified above** across all respondents in Q1 2026, where positive overall sentiment does not consistently translate into active recommendation. This is reflected in a high Sentiment Index of 73.0 contrasting with a negative Net Promoter Score (NPS) of -14.3, indicating a significant proportion of detractors relative to promoters. This suggests that while consumers and budtenders find the product appealing, they may be under-confident in recommending it, or the product experience is not sufficiently memorable to trigger peer advocacy. Compounding this, despite a high Familiarity Index of 96.8% suggesting widespread recognition once prompted, the brand exhibits low overall visibility (Aided Awareness 4.8%, Top-of-Mind Awareness 1.6%), and a lower Trial Index of 77.8% hints at a disconnect between recognition and initial purchase. This Trial-Familiarity gap could indicate barriers to access or availability, or insufficient messaging to convert familiarity into trial.

**DATA** Data: Sentiment Index = 73.0 (Q1 2026, N=63)

**DATA** Data: Raw NPS = -14.3 (Q1 2026, N=63)

**DATA** Data: Familiarity Index = 96.8% (Q1 2026, N=63)

**DATA** Data: Aided Awareness = 4.8% (Q1 2026, N=63)

**DATA** Data: Top-of-Mind Awareness = 1.6% (Q1 2026, N=63)

**DATA** Data: Trial Index = 77.8% (Q1 2026, N=63)

Regionally, FIGR demonstrates stronger performance in Ontario compared to the overall market in Q1 2026, with its **BHI Score (Brand Health Index, a composite score on a 0–100 scale combining 7 normalised component indices) moderately higher at 54.4** versus the overall 51.2. This enhanced regional engagement is supported by a robust Familiarity Index of 100.0% and a higher Trial Index of 82.3% within Ontario, both exceeding overall brand averages. This suggests that in Ontario, FIGR has successfully converted recognition into trial more effectively. However, even within this stronger market, the Advocacy Gap persists, with a high Sentiment Index of 73.6 contrasting with an NPS of –5.7 (N=35). This indicates that while Ontario consumers are more familiar and willing to try, their positive sentiment does not consistently translate into active recommendation.

| Segment | BHI Score | Familiarity Index (%) | Trial Index (%) | Sentiment Index | Raw NPS | N  |
|---------|-----------|-----------------------|-----------------|-----------------|---------|----|
| Overall | 51.2      | 96.8                  | 77.8            | 73.0            | –14.3   | 63 |
| Ontario | 54.4      | 100.0                 | 82.3            | 73.6            | –5.7    | 35 |

FIGR's priority action here is to dissect the drivers behind its stronger BHI and trial performance in Ontario, seeking scalable lessons to replicate this success in other regions, while simultaneously addressing the persistent Advocacy Gap even within its strongest market.

## Key Takeaways

FIGR currently grapples with a fundamental challenge: **converting its widespread familiarity into both spontaneous brand recall and active advocacy**. Despite high overall familiarity (96.8%) and positive sentiment (73.0), driven by 'consistent quality' (39.7%), the brand exhibits low Top-of-Mind awareness (1.6%) and a persistent Advocacy Gap, contributing to an overall negative Net Promoter Score of –14.3. This indicates that while the brand is generally liked, it is not consistently top-of-mind or actively recommended. The brand's competitive position is largely perceived as undifferentiated (60.3% 'about the same'), and purchase frequency remains stable at low levels (58.8% at most once per month).

While regions like Ontario show comparatively stronger engagement (BHI Score 54.4) and the Bud-tender segment exhibits positive advocacy (NPS 5.9), the significant divergence in advocacy among Store Managers (NPS –36.8) highlights a critical need to align internal stakeholder support. The central opportunity for FIGR lies in leveraging its strong foundational familiarity and positive perception of quality to craft a more distinctive brand narrative. This narrative should resonate deeply enough to not only elevate visibility beyond mere recognition but also strengthen differentiation, thereby translating positive product sentiment into active, widespread recommendation across both consumers and key retail partners.

The most critical action for FIGR is to develop targeted education and engagement programs for retail staff, especially Store Managers, to convert their existing familiarity and positive sentiment into confident, active product advocacy, unlocking a powerful channel for market growth.

## Quarter-Over-Quarter Patterns

FIGR has consistently benefited from **stable perceptions** of ‘consistent quality,’ ‘appealing packaging or design,’ and ‘budtender recommendation’ as key drivers, indicating a steadfast core appeal. This strong foundation is further supported by high overall brand familiarity, which remains robust, and a compounding positive regional engagement observed in Ontario, where a higher Trial Index (82.3%) suggests increasing conversion of awareness into first-time use.

**DATA** Data: ‘Consistent quality’ as driver = 39.7% (stable QoQ)

**DATA** Data: ‘Appealing packaging or design’ as driver = 25.4% (stable QoQ)

**DATA** Data: ‘Budtender recommendation’ as driver = 23.8% (stable QoQ)

**DATA** Data: Overall Familiarity Index = 96.8% (stable QoQ)

**DATA** Data: Ontario Trial Index = 82.3% (higher than overall)

However, the brand is at risk due to persistently low widespread visibility, reflected in modest Top-of-Mind (1.6%) and Aided awareness (4.8%), which has remained largely unchanged. This low visibility, coupled with a stable, undifferentiated competitive positioning (60.3% ‘about the same’) and stagnant purchase frequency (58.8% purchasing at most once per month), contributes to an ongoing Advocacy Gap. Despite generally positive sentiment (73.0), the brand consistently records an overall negative Net Promoter Score (-14.3), with a particularly acute and unchanged challenge among Store Managers (NPS -36.8).

**DATA** Data: Top-of-Mind awareness = 1.6% (stable QoQ)

**DATA** Data: Aided awareness = 4.8% (stable QoQ)

**DATA** Data: Perceived as ‘about the same’ = 60.3% (stable QoQ)

**DATA** Data: Purchase at most once per month = 58.8% (stagnant QoQ)

**DATA** Data: Sentiment Index = 73.0 (stable QoQ)

**DATA** Data: Raw NPS = -14.3 (consistent with all-time average)

**DATA** Data: Store Managers Raw NPS = -36.8 (unchanged)

The observed stability in positive drivers, alongside the persistence of awareness and advocacy gaps, suggests that incremental adjustments are insufficient. For the upcoming period, the trajectory points to a critical need for **disruptive strategies to convert high brand familiarity into dramatically increased trial and advocacy**. Leveraging the consistent, positive sentiment among Budtenders and replicating Ontario's relatively higher trial success could serve as a model for accelerating growth trajectory in other regions. Concurrently, a fundamental re-evaluation of how to engage and equip Store Managers is essential to reverse their significant advocacy deficit, which remains a key drag on overall brand health.

The implication for FIGR's quarter-over-quarter trajectory is clear: without a strategic intervention to significantly boost awareness and close the advocacy gap, the brand risks plateauing as a known but not actively recommended or frequently purchased option in a fragmented market.

## Strategic Priorities

---

For the upcoming quarter, FIGR's strategic priorities must center on **aggressively addressing its fundamental challenges in brand visibility and advocacy**. The brand needs to implement targeted initiatives to elevate Top-of-Mind awareness (currently 1.6%) and convert its high familiarity (96.8%) into increased trial (currently 77.8%), specifically by leveraging regional successes in Ontario (Trial Index 82.3%) and stronger recognition within specific demographic pockets.

A key strategic imperative involves comprehensively closing the Advocacy Gap. This requires a deep dive into factors contributing to the significantly negative Net Promoter Score among Store Managers (-36.8), contrasting with the positive sentiment and NPS observed among Budtenders (5.9). Understanding this disparity will inform the development of tailored educational and motivational programs for retail staff. Furthermore, FIGR must investigate why acknowledged drivers like 'consistent quality' (39.7%) are not translating into more frequent engagement, given that nearly three-fifths of respondents (58.8%) currently purchase less than once per month. This necessitates identifying specific levers to encourage active recommendation and drive consistent purchase frequency. Finally, FIGR must establish greater brand differentiation, moving beyond the current perception of being 'about the same' (60.3%) as competitors, through a compelling and unique brand story.

FIGR's urgent mission for the next quarter is to deploy an integrated strategy that not only enhances brand salience and drives trial but crucially activates its retail advocates, particularly Store Managers, by providing them with compelling reasons and tools to confidently recommend the brand, thereby converting latent positive sentiment into measurable advocacy and increased market share.

## Methodology & Data Quality

---

### Data Source

This report draws on survey data collected through the **BTA (Budtenders Association)** platform. All respondents are verified, active budtenders enrolled in the BTA training ecosystem. Survey participation is opt-in and occurs as part of ongoing training and assessment cycles.

## Respondent Verification

Respondents are authenticated through BTA's enrolment and session-tracking system. Only respondents with verified budtender status at a licensed retail cannabis location are included in brand-level analyses.

## Confidence Tiers and N-Thresholds

All metrics and claims in this report are assigned a confidence tier based on the number of qualifying respondents (N) in the relevant segment or period:

| Tier                   | N Threshold      | Interpretation                   |
|------------------------|------------------|----------------------------------|
| <b>High Confidence</b> | $N \geq 30$      | Stable, reportable finding       |
| <b>Directional</b>     | $15 \leq N < 30$ | Early signal; treat with caution |
| <b>Suppressed</b>      | $N < 15$         | Not reported (insufficient data) |

Claims marked **Directional** are prefaced with "Early signal:" throughout this report. Suppressed data is excluded from all outputs.

## Comparison Windows

- **Quarterly reports:** Primary comparison is to the immediately preceding quarter (QoQ). An all-time baseline is used for contextual anchoring where available.
- **Monthly reports:** Primary comparison is to the prior month (MoM). Quarter-to-date (QTD) aggregates are used where monthly N is insufficient.
- **Biannual reports:** Spring and Fall waves are compared to the prior equivalent wave (year-over-year cadence).

## Index Construction

Composite indices (e.g., Brand Health Index, Choice Friction Index) are calculated using pre-defined question batteries and scoring rubrics maintained in the BTA Question Bank.

## Quality Assurance Steps

1. **Duplicate response removal:** Each respondent-period combination is deduplicated before analysis.
2. **Outlier review:** Extreme response distributions are flagged for human review before claim generation.
3. **Directional consistency check:** Claims where the stated direction contradicts the underlying magnitude are automatically flagged as `direction_mismatch`.
4. **Orphan reference check:** Claims referencing question IDs not present in the underlying evidence packet are flagged as `orphan_reference`.
5. **Human review gate:** Any report with a readiness score below 0.70 or with unresolved directional mismatch flags requires analyst sign-off before distribution.

## Limitations

- This report reflects the perceptions and behaviours of BTA-enrolled budtenders and does not represent the broader cannabis retail workforce.
- Response rates vary by brand and period; lower-N periods may reflect seasonal variation or enrolment fluctuations rather than true attitude shifts.
- All findings are observational. No causal inferences should be drawn from this data.

## Appendix

---

FIGR continues to face a fundamental challenge in establishing widespread brand visibility, reflected in generally low awareness metrics during Q1 2026. Overall, Top-of-Mind (TOM) awareness registered at a modest 1.6%, with Aided awareness slightly higher at 4.8%. This low visibility is particularly pronounced within the Store Manager segment, where FIGR recorded zero TOM, unaided, and Aided awareness (dir.; N=19). However, certain demographic and regional pockets exhibit slightly higher recognition; TOM awareness in Ontario reached 2.9% and Aided awareness was 5.7%, while Early signal: the 35-44 age group showed the highest TOM and Aided awareness at 6.3% (dir.; N=16).

Despite low awareness, 'Consistent quality' stands out as the primary driver for FIGR, chosen by 39.68% of respondents, a proportion that remained stable quarter-over-quarter. Additionally, 'Appealing packaging or design' (25.40%) and 'Budtender recommendation' (23.81%) are notable secondary drivers, also showing stability from the previous period. However, this positive perception of drivers does not consistently translate into frequent engagement, as nearly three-fifths (58.73%) of respondents reported purchasing FIGR less than once per month or about once per month, with this frequency remaining unchanged. Furthermore, the brand's competitive position appears to be largely perceived as undifferentiated, with 60.32% of respondents finding FIGR 'About the same' when compared to competitors, indicating stability in this perception.

Advocacy for FIGR remains a critical area for development, with the brand recording an overall negative Net Promoter Score (NPS) of -14.29 in Q1 2026, consistent with its all-time average. Detractors comprise a larger proportion (36.51%) than promoters (22.22%) across all segments. This advocacy challenge is particularly acute among Store Managers, who registered a significantly lower NPS of -36.84 (dir.; N=19), suggesting potential disconnects between brand offering and store-level engagement or confidence. In contrast, Budtenders exhibit a positive NPS of 5.88 (N=34), indicating a segment that is more inclined to recommend the brand. This divergence in NPS between Budtenders and Store Managers, alongside Budtender Aided awareness (2.9%) being lower than overall Aided awareness (4.8%), suggests a potential opportunity to better equip and engage Budtenders to leverage their positive sentiment for broader advocacy. Conversely, understanding and addressing underlying concerns preventing Store Managers from becoming promoters is crucial, as their specific criteria for recommendation or operational challenges may impede advocacy.
