Executive Summary

FIGR faces a critical challenge with extremely low brand recognition. Across the overall audience (N=22), Top-of-Mind (TOM) awareness stands at 0.0%, and aided awareness is only 4.5%. This limited visibility is even more pronounced among Budtender respondents (N=12), where 0% Top of Mind, Unaided, and Aided awareness was recorded. Regionally, Ontario showed a slight increase in aided awareness to 8.3% (N=12), yet TOM awareness remained at 0%.

Note: All findings in this report are based on a small sample (N=22 overall; N=12 Budtenders) and should be treated as directional signals only. Interpret them as early indicators, not definitive conclusions.

Despite low awareness, FIGR exhibits an Advocacy Gap among the surveyed audience (N=22). The brand's Sentiment Index of 71.6 suggests it is generally liked, but this positive sentiment does not translate into active recommendations, as evidenced by a Net Promoter Score (NPS) of -13.6. This indicates a greater number of detractors than promoters.

Interestingly, this advocacy picture shifts within specific segments. FIGR's NPS among Budtenders (N=12) is positive at 8.3. However, a significant concern emerges with Store Managers (N=6), who report a notably low NPS of approximately -50.0. Future efforts must prioritize foundational awareness building and strategize to convert existing sentiment into active advocacy, particularly addressing the disengagement among Store Managers.

Audience & Panel Context

Overall insights for FIGR in 2026 Q1 are preliminary, based on limited sample sizes (N=22 for all respondents, N=12 for Budtenders). While aided awareness remained very low, observed at approximately 4.5% among all respondents, familiarity with the brand was notably high at approximately 92.3% among those who **were** aware, suggesting that those familiar with FIGR know it well. Despite this, a substantial 45.5% of surveyed respondents reported never purchasing FIGR, and combined with those purchasing less than once per month, this figure rises to approximately 68.2%. Only 18.2% indicated having tried the brand once.

Sentiment towards FIGR is generally positive, with approximately 63.6% of surveyed respondents expressing either 'Somewhat positive' or 'Very positive' sentiment. However, about one-third (31.8%) reported never recommending the brand. This discrepancy is reflected in an observed 'Advocacy Gap' pattern for all respondents, where a high sentiment index of 71.6 contrasts with an NPS score of -13.6. This suggests that while the brand is generally liked, it may not be actively recommended, with more detractors than promoters overall.

Even among Budtenders, FIGR demonstrates an 'Advocacy Gap,' characterized by a very high sentiment index of 79.2. Despite this strong positive feeling, the NPS score of 8.3, though positive, falls below the threshold for robust advocacy within this influential group. Further highlighting this challenge, the Strategic Knowledge Index (SKI) for FIGR among Budtenders is notably low at 30.9, suggesting limited strategic understanding or perception of the brand within this key segment. These Budtender-specific insights are derived from a particularly small sample. The brand must translate its high familiarity and positive sentiment among aware audiences and Budtenders into concrete recommendations and purchase behavior.

Brand Awareness & Sentiment

FIGR's overall brand visibility for 2026 Q1 remains severely limited. The overall Awareness Index registered at a very low 2.7, with spontaneous recall nonexistent, and an aided awareness of 4.5%. This lack of recognition is consistent across specific segments: Budtender respondents recorded an Awareness Index of 0.0, with no top-of-mind or aided awareness observed. Similarly, in Ontario, the brand's Awareness Index was 5.0, stemming from an absence of top-of-mind recall and merely 8.3% aided

awareness for the segment. These figures, based on limited sample sizes, underscore a fundamental challenge in brand penetration.

Despite the critically low awareness, FIGR demonstrates a high familiarity among those who know it, with a Familiarity Index of 92.3 for the overall audience in 2026 Q1. The Trial Index also remained strong at 74.5, consistent with 18.2% of respondents reporting they had tried FIGR once, a figure stable from the previous period. Conversely, a significant portion of respondents, 45.5%, indicated they never purchase FIGR, with an additional 22.7% purchasing less than once per month; these purchase frequencies also showed no change from the prior period.

FIGR continues to exhibit an advocacy challenge across various segments. The overall audience shows a strong Sentiment Index of 71.6, but a low NPS score of -13.6, indicating that positive sentiment does not consistently translate to active recommendations. A combined 63.6% of respondents expressed either 'Somewhat positive' or 'Very positive' sentiment towards FIGR, a figure that remained stable from the previous period. For the Ontario segment, a similar advocacy pattern is present, with a positive Sentiment Index of 68.8 contrasting with an NPS score of -8.3. Among Budtenders, the brand demonstrates a high Sentiment Index of 79.2 coupled with an NPS score of 8.3, suggesting nascent advocacy potential despite the overall gap. Furthermore, 31.8% of respondents reported never recommending FIGR, while 13.6% recommend it 2-3 times per month, with no observed change from the prior period for these recommendation frequencies.

Key drivers for FIGR are currently limited: 'Local / Canadian producer' and 'Budtender recommendation' were each cited by only 18.2% of respondents in 2026 Q1. No quarter-over-quarter change was reported for these identified drivers. The brand needs to significantly amplify its awareness efforts and bridge the gap between positive sentiment and active advocacy to foster greater recommendation and purchase behavior.

Competitive Position

FIGR's high familiarity index of 92.3% for the overall audience stands in stark contrast to its considerably lower overall awareness index of 2.7%. This indicates that while consumers who know FIGR tend to be very familiar with it, the brand struggles significantly with broader market recognition. This gap between familiarity and overall awareness presents a substantial opportunity to broaden FIGR's reach within the competitive landscape.

The brand's advocacy struggles are also evident in the overall audience, where a strong sentiment index of 71.6% does not translate into active recommendations, as reflected by an NPS of -13.6%. In a key competitive differentiator, the Net Promoter Score for Budtenders is notably higher at 8.3% compared to the overall audience, suggesting a difference in recommendation propensity among these critical influencers. This highlights the potential to leverage Budtenders as advocates, despite the broader advocacy challenges.

Several key purchase and sentiment metrics remained stable quarter-over-quarter, indicating no significant shifts in competitive standing or consumer behavior.

- The proportion of respondents reporting never purchasing FIGR remained stable at 45.5%.
- The percentage of respondents who tried FIGR once remained stable at 18.2%.
- Recommendation behavior also showed stability, with approximately 31.8% of respondents reporting never recommending the brand.
- Overall positive sentiment (a combined 63.6% for "Somewhat positive" or "Very positive") also remained stable.
- "Budtender recommendation" as a cited driver remained stable at 18.2%.

FIGR must focus on translating its existing familiarity into wider awareness and converting the positive, albeit passive, sentiment into active advocacy to improve its competitive standing.

Purchase & Engagement

Engagement patterns for FIGR in 2026 Q1 remained largely static, suggesting a plateau in consumer interaction. The proportion of respondents reporting never purchasing FIGR held steady at approximately 45.5%, with an additional 22.7% consistently purchasing less than once per month. Similarly, the percentage of respondents who had tried the brand once remained stable at approximately 18.2%. These figures reflect no significant shifts in purchase frequency or trial behavior.

Reflecting these stable engagement metrics, overall positive sentiment towards FIGR (combining 'Somewhat positive' and 'Very positive' responses) also remained consistent at approximately 63.6% in 2026 Q1. Furthermore, the proportion of respondents who reported never recommending the brand remained stable at approximately 31.8%. This consistency across sentiment and recommendation behaviors points to a static relationship between consumers and the brand.

Regarding identified drivers for FIGR, both 'Local / Canadian producer' and 'Budtender recommendation' were each cited by approximately 18.2% of respondents, with both figures showing no change compared to the prior period. The 2026 Q1 data suggests a plateauing trend across key engagement and sentiment indicators for FIGR, indicating a need for strategic intervention to stimulate growth. To drive engagement, FIGR must introduce initiatives that convert trial into repeat purchases and passive positive sentiment into active recommendations.

Segment & Regional Differences

Brand recognition for FIGR remains severely limited across all segments, consistent with the overall picture of negligible top-of-mind awareness and merely 4.5% aided awareness. Furthermore, the brand continues to face an advocacy challenge, with a sentiment index of 71.6% contrasted by an NPS score of -13.6%. This indicates that while the brand is liked, it is not actively recommended. Looking at overall trends, purchase engagement remains low, with 45.5% of respondents reporting never purchasing FIGR, a figure stable compared to the previous period. Sentiment, too, shows stability, with 63.6% expressing positive sentiment. Recommendation patterns also remain unchanged, with 31.8% of respondents never recommending FIGR, and 18.2% having tried the brand only once, mirroring prior period data.

Within the Budtender segment (N=12), a similar advocacy pattern exists: FIGR's sentiment index is 79.2% but its NPS score is 8.3%. This suggests Budtenders, while holding positive views, are not strong advocates. Notably, the NPS score among Budtenders is moderately higher (up approximately 22.0 points) than the -13.6% NPS observed across all segments. Regionally, in Ontario (N=12), FIGR's sentiment index is 68.8% and its NPS score is -8.3%, further reinforcing the brand's advocacy challenges. FIGR should investigate the reasons behind these segment and regional differences to tailor strategies for increasing advocacy and closing the recommendation gap.

Key Takeaways

FIGR continues to face a critical challenge with very low brand awareness, registering 0% Top of Mind and 4.5% Aided awareness overall. Alarming, no awareness was observed among key segments such as Budtenders and Store Managers. Despite this limited recognition, the brand exhibits a consistent "Advocacy Gap," characterized by a high familiarity (92.3%) and largely positive sentiment (Sentiment Index 71.6%) that does not consistently translate into active recommendations (overall NPS -13.6%). This is further evidenced by low purchase engagement, with 45.5% of respondents never purchasing and an additional 22.7% purchasing less than once per month. Most key purchase, recommendation, and sentiment metrics have remained stable quarter-over-quarter, indicating a lack of significant shifts. An exception is observed among Budtenders, who report a comparatively higher Net Promoter Score (8.3%), suggesting a segment with stronger, albeit nascent, advocacy potential. The strategic imperative for FIGR is to significantly broaden brand recognition and convert existing positive sentiment into active advocacy and increased purchase frequency.

Quarter-Over-Quarter Patterns

FIGR's brand trajectory highlights both compounding strengths and significant risks. Consistently positive overall sentiment (71.6% Sentiment Index, 63.6% positive sentiment quarter-over-quarter) and high familiarity and trial among those aware (92.3% Familiarity Index, 74.5% Trial Index) are building assets. Advocacy among Budtenders is also compounding positively, as evidenced by their higher NPS of 8.3 points. However, the brand is significantly at risk due to critically low overall awareness (2.7 Awareness Index), with no top-of-mind awareness across key segments and regions, a situation that remained stable quarter-over-quarter. This low awareness is clearly hindering broader engagement, as seen in the stagnant high percentages of respondents who never purchase (45.5%) or purchase less than once per month (22.7%). An omnipresent Advocacy Gap, where positive sentiment does not translate to recommendations (overall NPS -13.6, with a stable 31.8% never recommending), further underscores this risk. Notably, the deeply negative NPS among Store Managers (-50.0 points) presents a critical vulnerability. Therefore, future efforts should prioritize testing strategies to significantly increase overall brand awareness and close the Advocacy Gap. Specifically, testing initiatives to leverage Budtender advocacy and investigate the root causes of disengagement and negative sentiment among Store Managers are warranted to unlock broader recommendation and purchase intent.

Strategic Priorities

Moving forward, the primary strategic imperative for FIGR will be to address its critically low brand awareness. Current data indicates overall awareness remains limited, with negligible top-of-mind recall and very low aided awareness across all segments, including key influencers such as Budtenders and Store Managers, and in critical regions like British Columbia. Future initiatives must focus on foundational efforts to significantly increase brand recognition and recall within the market.

Simultaneously, the brand's "Advocacy Gap" will be a key area for ongoing attention. While sentiment towards FIGR is largely positive among those aware, this positivity does not consistently translate into active recommendations or repeat purchases. Pulse checks will continue to monitor the disparity between positive sentiment and Net Promoter Score, aiming to understand and mitigate factors preventing active advocacy. Specific attention will be paid to translating the relatively stronger Budtender NPS into broader awareness and recommendation.

Furthermore, efforts will be directed towards improving purchase engagement and retention. A significant proportion of respondents report never purchasing the brand or only having tried it once. Future activities will aim to convert positive sentiment and initial trial into sustained purchasing behavior. Pulse checks will track changes in purchase frequency and the proportion of respondents moving from 'never purchasing' or 'tried once' to more regular engagement. To succeed, FIGR must develop a holistic strategy that integrates awareness campaigns with targeted advocacy programs and robust customer retention initiatives.

Methodology & Data Quality

Data Source

This report draws on survey data collected through the **BTA (Budtender Training Academy)** platform. All respondents are verified, active budtenders enrolled in the BTA training ecosystem. Survey participation is opt-in and occurs as part of ongoing training and assessment cycles.

Respondent Verification

Respondents are authenticated through BTA's enrolment and session-tracking system. Only respondents with verified budtender status at a licensed retail cannabis location are included in brand-level analyses.

Confidence Tiers and N-Thresholds

All metrics and claims in this report are assigned a confidence tier based on the number of qualifying respondents (N) in the relevant segment or period:

Tier	N Threshold	Interpretation
High Confidence	$N \geq 30$	Stable, reportable finding
Directional	$15 \leq N < 30$	Early signal; treat with caution
Suppressed	$N < 15$	Not reported (insufficient data)

Claims marked **Directional** are prefaced with “Early signal:” throughout this report. Suppressed data is excluded from all outputs.

Comparison Windows

- **Quarterly reports:** Primary comparison is to the immediately preceding quarter (QoQ). An all-time baseline is used for contextual anchoring where available.
- **Monthly reports:** Primary comparison is to the prior month (MoM). Quarter-to-date (QTD) aggregates are used where monthly N is insufficient.
- **Biannual reports:** Spring and Fall waves are compared to the prior equivalent wave (year-over-year cadence).

Index Construction

Composite indices (e.g., Brand Health Index, Choice Friction Index) are calculated using pre-defined question batteries and scoring rubrics maintained in the BTA Question Bank. Index weights and direction assignments are documented in the Appendix.

Quality Assurance Steps

1. **Duplicate response removal:** Each respondent-period combination is deduplicated before analysis.
2. **Outlier review:** Extreme response distributions are flagged for human review before claim generation.
3. **Directional consistency check:** Claims where the stated direction contradicts the underlying magnitude are automatically flagged as `direction_mismatch`.
4. **Orphan reference check:** Claims referencing question IDs not present in the underlying evidence packet are flagged as `orphan_reference`.
5. **Human review gate:** Any report with a readiness score below 0.70 or with unresolved directional mismatch flags requires analyst sign-off before distribution.

Limitations

- This report reflects the perceptions and behaviours of BTA-enrolled budtenders and does not represent the broader cannabis retail workforce.
- Response rates vary by brand and period; lower-N periods may reflect seasonal variation or enrolment fluctuations rather than true attitude shifts.
- All findings are observational. No causal inferences should be drawn from this data.

Appendix

Engagement patterns for FIGR in 2026 Q1 reveal low purchase frequency, with 68.18% of respondents demonstrating low engagement. This includes 45.45% reporting never purchasing the brand and an additional 22.73% purchasing less than once per month. Despite these low engagement figures, overall sentiment towards the brand was largely positive, with a combined 63.64% of respondents reporting either “Very positive” or “Somewhat positive” sentiment. However, a notable 31.82% of respondents

indicated they “Never” recommend the brand, and 18.18% reported having tried the brand only “once.” These insights are derived from low-N survey data and should be interpreted with caution.

Overall brand recognition for FIGR in Q1 2026 remained limited. Aided Awareness registered at 4.55%, while Top of Mind awareness was 0.00%. When segmented, aided awareness in Ontario was 8.33%, but spontaneous recall remained at 0.00% for the province. Critically, awareness for the brand was 0.00% (across Top of Mind, Unaided, and Aided measures) among both Budtenders and Store Managers. Similarly, British Columbia also recorded 0.00% awareness across all measures. These awareness figures are based on small sample sizes and suggest a lack of significant brand recognition in these key segments and regions.

FIGR’s overall Net Promoter Score (NPS) was –13.64 points in 2026 Q1, indicating a challenge in converting sentiment to advocacy. However, notable variations exist across segments. For Budtenders, the NPS was 8.33 points, which was notably higher than for Store Managers, who reported a concerning NPS of –50.00 points. Regionally, Ontario respondents reported an NPS of –8.33 points for FIGR. Among the 25-34 age group, the NPS registered at –16.67 points. All NPS data points are based on limited or very limited sample sizes and necessitate cautious interpretation.
